

Colour Tone Gum Shading

The colour of the acrylic on a denture is an area that is often ignored. However, the colour of the gum work can have a dramatic effect on the overall restoration.

The most natural denture in the world can look false as soon as a patient smiles and shows the denture base acrylic. It doesn't have to be that way.

Natural Gingival Colouration

We can colour the denture gum work to closely match the patients own natural gingival tissue. Replicating the appearance of the natural gingival tissue is effective on all dentures but especially so on partial dentures where the sudden change from natural gum to denture acrylic can be stark.

Using Schottlander's Colour Tone acrylic we can closely match virtually any natural gingival tissue. We do this as a matter of course with our 'Ultimate' dentures but we offer this process with any standard of acrylic denture.

Huge Benefit

One huge benefit of Schottlander's Colour Tone acrylic is that it is a permanent solution, unlike some 'paint' on systems, as it is layers of up to eight colours built up within the normal denture acrylic.

We can work from a general description of the patients gum pigmentation but ideally photographs are best. For the 'Ultimate' match we can make initial shade tabs to 'try-in' the gum work before processing the dentures.

Cost Effective

Gum staining is included with out 'Ultimate' Natural Dentures but is also a cost effective option on any other standards of denture work with a simple single colour solution expertly applied to the denture base starting from only £10 per denture! If you would like more information please let us know.

DIO^o Implants

We are currently working on our first DIO implant case. Whilst relatively new to the UK DIO have a wealth of experience in the rest of the world.

So far the system and support looks good from a laboratory perspective. We will continue to monitor the system and may even do a case study, with the potential of reporting our findings in a future newsletter.

This adds further to the already long list of implant systems we are able to work with. If anyone would like further information about DIO or any other system please let us know.
